

Data Capture, Cleansing and Sharing

EDGE Data Purity

EDGE captures, processes, stores and shares Big Data to provide clients the ability to analyse, trend and report on consumption data and other relevant metrics.

EDGE technology sources data from multiple regions, devices and servers to enable clients to analyse their data. This can be done using EDGE software or any other third-party query and reporting software tool. EDGE data purity technology overcomes common challenges in retrieving and providing clean data for accurate reporting.

EDGE Data Sharing

- Export data via API
- Export data via CSV
- Access clean and continuous data
- Manage multiple data sources efficiently
- Access data via ftp in NMI format
- Access to electricity, gas, thermal, water and other relevant data
